```java
AMIdentity amUser = getUser( userName );

// In order to write to the user attributes, need the following setup.
// SSUser has issues here since certain attributes are not there for
// system users.
Map userAttributeMap = new HashMap();
Set lockoutTime         = new HashSet(1);
Set successiveLockouts = new HashSet(1);
Set lockoutCountClear  = new HashSet(1);
lockoutTime.add("0");
successiveLockouts.add("-1");
lockoutCountClear.add("0");
userAttributeMap.put( SSAttribute.USER_LOCKOUT_TIME, lockoutTime )
```

# ClassFly
# JAVA

## Table of Content

## Description

Java is easy to write and easy to run—this is the foundational strength of Java and why many developers program. It can be used to create complete applications that can run on a single computer or be distributed across servers and clients in a network. As a result, you can use it to easily build mobile applications or run on desktop applications that use different operating systems and servers, such as Linux or Windows.
